

Automated Generation of Analytic Calculi for Logics with Linearity

Agata Ciabattoni

Technische Universität – Wien Austria

`agata@logic.at`

We show how to automatically generate analytic hypersequent calculi for a large class of logics containing the linearity axiom

$$\text{(lin)} \quad (A \rightarrow B) \vee (B \rightarrow A)$$

starting from existing cut-free sequent calculi for the corresponding logics without (lin).
